

PROFESSIONAL SUMMARY

Data-focused Software Engineer with a Master's in Computer Science and experience using Python, SQL, APIs, and automation to collect, clean, validate, and analyze complex data. Skilled in building reproducible workflows, investigating data issues, and translating technical findings into clear, usable insights.

WORK EXPERIENCE

Wisdom Square Technologies

New York, United States

Software Engineer

January 2025 - Present

- Build Python services, PostgreSQL workflows, APIs, and automation that move and process data across internal applications and recurring business processes.
- Developed an internal E-Shop with automated inventory updates and database workflows, replacing manual processes and improving the consistency of product and stock data.
- Design API and webhook integrations between systems, reducing manual data handling and enabling more reliable information exchange.
- Work with product, engineering, and business teams to turn operational questions into structured technical requirements and practical data-driven solutions.
- Investigate application and database issues, optimize PostgreSQL-backed processes, and document workflows to improve data reliability and reproducibility.

Reminiscence Jewels Inc

New York, United States

Software Engineer

April 2024 - December 2024

- Built integrations across internal applications, third-party services, APIs, and databases to automate recurring data workflows and consolidate information across systems.
 - Optimized PostgreSQL queries and backend processing for data-intensive workflows, improving query performance and application responsiveness.
 - Implemented data validation and error-handling processes to identify inconsistencies and improve the reliability of data moving between systems.
 - Investigated issues across applications, APIs, databases, and workflows, translating technical findings into clear recommendations for technical and nontechnical stakeholders.
-

TECHNICAL SKILLS

- **Data Analysis:** Python, SQL, Pandas, NumPy, Data Cleaning, Data Validation, Exploratory Analysis
 - **Data Engineering:** ETL Workflows, Web Scraping, API Integrations, Workflow Automation, Data Processing
 - **Databases:** PostgreSQL, MongoDB, Query Optimization, Data Modeling
 - **Visualization & Modeling:** Plotly, Matplotlib, Scikit-learn, Random Forest, Feature Engineering, Model Evaluation
 - **Cloud & Engineering:** AWS, Docker, Git, GitHub, CI/CD, REST APIs, Webhooks
 - **Additional Programming:** JavaScript, TypeScript, C#, Node.js
-

PROJECT HIGHLIGHTS

LaLiga Championship Prediction & Analytics

Python | Pandas | NumPy | Scikit-learn | Random Forest | Plotly | Matplotlib | Jupyter

- Built an end-to-end analytical workflow using **11 seasons of publicly available football data**, from web scraping and cleaning through analysis, modeling, and visualization.
 - Scraped data from FBRef and consolidated **220 team-season records across 20 features**, resolving missing values, inconsistent formats, duplicate records, and differences between seasons.
 - Created reusable Python workflows for validation, preprocessing, transformation, and feature generation to produce a consistent, analysis-ready dataset.
 - Analyzed historical patterns, trained and evaluated a Random Forest model, and created visualizations to communicate trends and prediction results clearly.
-

EDUCATION

PACE UNIVERSITY

New York, United States

- *Master of Computer Science (STEM)*

May 2024
